ACCESS CONTROL SOLUTIONS THAT WORK FOR YOUR BUSINESS

At Dennison Doors we can ensure that your entrance solution is safe and secure whilst ensuring freedom of movement for authorised personnel with our range of access control systems. Whether you need to add that extra layer of security to an existing entrance; or for a new install, you can be certain we will have the right solution for you. Often in a business environment it is imperative to have constant access at all times and using a key to enter a building isn't always practical. With our choice of magnetic stripe, proximity, or code lock access systems we can meet the precise needs of your business.

A simple method of allowing for communication with employees or visitors that need access to your premises is via a door phone entry system. External threats are held at bay via the door locking mechanism and you choose who enters the building with this simple and cost-effective access control solution.

We can supply, install, and maintain access control systems to suit any requirement from a small or large commercial building to a residential property.
